1 leveller

Product description

The interior leveler is a very useful piece for furniture, because it is installed on its legs, allowing its height to be leveled in the event of a damage or unevenness on the floor. This is fitted and fixed with two screws, then with an Allen key its height is leveled. The dimensions of this piece are 34mm wide by 22mm tall with a total length of 48.2 mm. The plastic leveling area measures 20mm wide by 34mm long. It is a piece composed of zamak and plastic at its base to protect the floors and comes in a packaging of 200 units.

Product benefits

Interior leveller M10x22, a very useful piece of equipment to adjust the height of furniture on any surface.

Interior leveller M10x22, a very useful piece of equipment to adjust the height of furniture on any surface.

For **manufacturers**, its **zamak and plastic structure** provides a strong and durable solution for levelling furniture.

Furniture leveller M10x22, a very useful piece of equipment for levelling furniture on any surface.

Frequently asked questions

What installation conditions must be taken into account?

It is essential to respect the machining of the module in order to correctly accommodate the M10 thread. The mounting must allow access through the side to manipulate the screw with an Allen key. It is recommended to install with centred thread to ensure alignment.

On what type of structures or plinths is it advisable to install them?

This model is designed for modules with pre-assembled legs, machined bases or furniture structures where the adjustment is made from the inside. It is compatible with solutions that require internal adjustment without front access.

What structural strength does it offer compared to conventional levellers?

Thanks to its construction with a zamak body and technical plastic base, this leveller offers high mechanical strength and stability on furniture supports of up to 250 kg, depending on the number of units installed.

Is this leveller compatible with Frigo or Bone bases?

Yes, the design of this leveller allows it to be mounted on compatible plastic bases such as Bone or Frigo, as long as the base has an M10 threaded socket. This makes it ideal for adjustable leg systems in kitchens, technical modules or industrial furniture.

What is the height adjustment range of this leveller?

The M10x22 leveller allows a height adjustment of 10 mm, adjustable by means of an Allen key from inside the module. Its total length is 42.4 mm with a useful height of up to 52 mm, ideal for correcting unevenness in modular or industrial installations.
