

## Double plate for high wall units, Steel, Natural steel

SKU 8918803 / EAN 8432393123110

### Packaging

200 Unit

### Finishing

Natural steel

### SKU

8918803

## Product features

## Components

1 plate

## Product description

This plate is necessary for mounting the hangers of the Level-up 1 system for connection to the wall, ideal for the installation of tall modules. The piece is made of steel with a natural finish and has dimensions of 130 mm long and 24 mm wide, with a thickness of 1.8 mm. The plate has two folded flaps, guaranteeing easy mounting of the hangers and offering a solid structure. Its installation is done by screwing and it has 6.5 mm diameter holes. The presentation in packaging is 200 units.

## Product benefits

Supporting element for hanging systems in tall units. Its reinforced structure guarantees stability and safe installation.

**Manufacturers:** Manufactured in **steel with a natural finish**, it has a robust construction with **dimensions of 130 x 24 mm** and a thickness of **1.8 mm**.

**Distributors/Wholesalers:** It is offered in **packs of 200 units**, ideal for distributors who supply carpenters and furniture manufacturers.

**Carpenters:** Simple installation by **screwing into 6.5 mm holes**, guaranteeing a stable fixing to wall structures.

**E-commerce & Retail:** Product of high rotation in marketplaces and online shops, recommended for kitchen and bathroom furniture assembly systems.

## Frequently asked questions

---

What is the function of the double plate in the LevaFix high module system?

---

The double bracket allows the LevaFix system hangers to be attached to the wall, ensuring a sturdy fixing for tall modules and facilitating the even distribution of the furniture load.

What type of fasteners are compatible with the double plate?

---

It has holes with a diameter of 6.5 mm, compatible with standard mounting screws used in wall installations for kitchen and bathroom furniture.

What are the advantages of a natural steel finish?

---

Natural steel provides high structural strength, durability against wear and excellent compatibility with dry or technical indoor environments.

What are the specific dimensions of the deck?

---

The plate measures 110 mm long by 24 mm wide and is 1.8 mm thick, providing mechanical stability for vertical loads in high modules.

Is any additional reinforcement required for installation?

---

No, the plate has been designed for direct wall mounting in conjunction with LevaFix hangers, offering an all-in-one solution that does not require additional reinforcement.
